In your computer
A Hazmat Classroom

The U.S. DOT's Hazardous Materials Transportation Training Modules allow the user to get valuable hazardous materials transportation training *right at his or her own computer.*

Use the CD-ROM to train employees individually and at their own pace. Simply upload the Modules to a shared drive, to train multiple users from one disk; the modules can run "standalone," or from a server.

Printable records of completed training and test results help you comply with 49 CFR §172.200-704. The modules may be used for completing the General Awareness training requirements of the Hazardous Materials Regulations (HMR), or as a basis for a Function Specific training program.

In Version 5.0
What's New

Throughout Version 5.0, you'll find enhancements. It's easier to get around in, more user-friendly, and more plainly written than previous versions.

Hazmat training?
Who Needs

Any hazmat employee – that is, any one regulated under the HMR – must receive hazardous materials training.

You are regulated by the HMR if you or your employee work in a shipping, receiving, or material handling area, or if you may be involved in preparing or transporting hazardous materials in commerce; furthermore, any hazmat employee is required to be trained, and re-trained every three years.

Include:
Training Modules

- Introduction
- The Hazardous Materials Table
- Shipping Papers
- Marking and Labeling
- Placarding
- Packaging
- Carrier Requirements for all four modes
- End-of-module tests and printable test records
- Instructor/Student manuals
- Presentation masters for all ten hazardous materials transportation training modules
